

“We chose IndigoVision for its superior High-Definition image quality and its user-friendly alarm and audio management capabilities. Other key criteria were the ease of integration with third party systems and ability to scale up for our future expansion.”

Nezar Al-Bkower
ALV General Manager

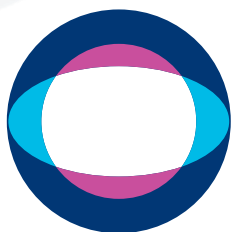

Aqaba Logistics Village, Jordan

An IndigoVision High-Definition (HD) IP Video solution has been deployed to protect the Aqaba Logistics Village (ALV), which is a tax-free hub located in Aqaba, Jordan, adjacent to the country's only container port. Both IndigoVision's HD and standard 4SIF resolution IP cameras have been installed to provide blanket CCTV coverage with the minimum number of cameras – one of the many advantages of deploying megapixel HD cameras.

Aqaba is an important gateway for Jordan and neighboring Iraq and the addition of a state-of-the-art surveillance system allows ALV to provide a high-security solution for its many international clients. In addition to monitoring the security of the site, ALV now has a video record of the logistics transactions, providing an audit trail in the event of a customer dispute. The system was designed and installed by IndigoVision's approved local Partner, Megatech.

The truly distributed architecture of IndigoVision's system was a key factor in being chosen for the project. It provides ALV with a scalable platform for their expansion plans and allows them to easily monitor the two existing 100,000 square foot warehouses and site perimeter, which form the first phase of the Village. Additional warehouses, office space and a weighbridge are planned for the future.

Another advantage of the high-resolution and high-quality video that is delivered from the HD IP cameras is that operators can digitally zoom in on critical areas during an investigation, while the whole field of view of the camera is still recorded. Unlike a traditional zoom on a PTZ, none of the camera scene is lost. In fact several different zoom views can be setup from the same feed, providing the operator with a powerful monitoring facility all from a single HD camera.
